

# HOW CAN YOU BETTER PROTECT YOUR COMPANY DATA AND ENSURE BUSINESS CONTINUITY?

## Allow us to help work with you and your team to identify the highest risks to your business and help mitigate those risks.

Because so many parts of today's businesses rely on IT, it is important that each process supported by IT is identified and plans developed to recover functionality should those systems become unavailable. These business systems are at risk daily from threats such as work stoppages, virus attacks, power outages, natural disasters, catastrophic hardware failure and more.

With our Business Continuity and Disaster Recovery Planning (DRP) solutions and services, we will work with you and your team to:

- Complete a business impact analysis (BIA) to identify your critical application services and platforms.
- Establish Restore Point Objectives (RPO) and Restore Time Objectives (RTO) for business-critical systems
- Leverage MHO DR deliverables to create or update your company's DR action plan.
- Identify compliance requirements based on both private and public requirements.
- Develop ongoing strategy for DR plan review based on ongoing business growth and requirements.
- Ensure best-practice technologies and processes are reviewed and applied where applicable to your business model

## MHO Solutions' DRP Practice is built around:

- ITIL-trained staff with multiple business industry experience
- Sarbanes-Oxley data retention and integrity requirements
- Microsoft Windows Server™ operating systems
- Microsoft Virtual Server 2005™
- Double-Take technology

## Available Services:

- Data Center Planning
- Data Center Outsourcing
- Business Continuity Planning
- Staff Augmentation
- Virtual Infrastructure Hosting
- Data Replication
- Help Desk Integration
- Vendor Selection Services
- Managed DNS

# CLOSE THE GAP BETWEEN YOUR IT CAPABILITY AND BUSINESS CONTINUITY REQUIREMENTS.

MHO SOLUTIONS WILL HELP MITIGATE RISK TO LOST DATA AND BUSINESS DOWNTIME.

**How ready is your company to address risk? What are your IT capabilities today? How long can your business survive without access to critical information? When was the last time recovery procedures were reviewed and tested? What are acceptable levels of information loss?**

These are the questions that will help you determine the level of readiness needed to support your business in times of outage and catastrophic failures. Let MHO and its staff's collective experience building Disaster Recovery plans and solutions address the following components of your Business Continuity framework:

- Server, storage, and network configuration
- Data backup, replication and recovery
- Off-site requirements (data AND infrastructure)
- Testing plans and procedures
- Executive level planning and overview including business impact assessments, vulnerability review, and resource procurement
- Ongoing policy and strategy development

It is also vital that today's Disaster Recovery and Business Continuity plans address issues such as data loss, internal malevolence, and various compliance requirements. Today's business are being held to higher standards, both in public and Federal views. Clients and customers will not tolerate business disruption and company's fiduciary responsibilities require that data is secure and that you and your management teams understand your organization's vulnerabilities and respond to them.

The bottom line is that today's business has:

- Increased reliance on IT
- Increased customer and client expectations
- Increased risks

Engage MHO Solutions today to begin a DR and Risk Assessment which will help you identify and mitigate the various risks, vulnerabilities, and compliance requirements to your company.

*"Only 7% of companies having a serious data loss are in business after 5 years."*

**-U.S. Bureau of Labor**

*"Organizations that lost Records in a Fire:*

- *44% never reopened for business.*
- *30% of the rest didn't stay in business for 3 years."*
