

STAY ON TOP OF NETWORK STATUS  
AND ISSUES. SPEND LESS TIME  
FIGHTING ISSUES AND DOWNTIME.

**Learn how you can get better network security and control,  
while freeing up more time for strategic projects and initiatives.**

As your company grows, your IT infrastructure needs to do more. But on average, companies spend 70 percent of their IT budgets on system maintenance and only 30 percent on new technology that increases security and control. Now imagine if you could shift funding from administrative maintenance to strategic investments, or better yet, core business development (non-IT).

We can help you increase network management and availability with less time and effort through:

- Automated monitoring and alerting (ICMP, SNMP, WMI, and more)
- Detailed event logging and statistical reporting
- Hosted management portal with management dashboard
- Detailed review of design and configurations
- Available Level 2+ support services

Our experienced team provides service and support for the latest platforms and technologies like Microsoft® Operations Manager 2005, Systems Management Server 2003, Cisco, and more to ensure your network is efficient and secure. MHO has also partnered with several top-tier telecom partners ensuring familiarity with today's most implemented technologies.

**Contact us and find out about  
our Virtual Network  
Operations Center (VNOC)  
offering.**

MHO Solutions offers a wide variety of VNOC implementations to meet business sizes and requirements. Basic implementations start from \$50 per site and include automatic notification and event logging.

Take advantage of our current promotions and let MHO automate your network and infrastructure monitoring. Proactive monitoring and instant alerting will minimize downtime while letting your staff focus on core business and development.

# 24X7 SUPPORT, AUTOMATED EVENTS WITHOUT INCREASED STAFF REQUIREMENTS.

**LEVERAGE YOUR EXISTING INFRASTRUCTURE INVESTMENT AND STAFF WITH ADVANCED MANAGEMENT TOOLS: AN INDUSTRY BEST-PRACTICES ASSESSMENT IS THE FIRST STEP.**

It's a fact of business today: IT management often borders on chaos. We have extensive experience helping customers like you achieve more security and control. We help you leverage your existing infrastructure and IT staff while lowering costs with advanced management tools. MHO Solutions has used its experience and knowledge of supporting clients like you to develop a powerful toolset to help you and your staff:

- Easily administer, monitor, and automate your IT environment from a single location.
- Spot issues easily before they happen with detailed metrics and reporting.
- Identify security vulnerabilities and trouble areas.
- Optimize design and configuration based on real-time usage statistics and reporting.
- Automate events such as help desk ticket creation, IT staff notification, and more.

MHO Solutions Virtual Network Operations Center (VNOC) also offers the following options:

- Hosted Management Portal (utilizing Microsoft SharePoint Services).
- Hosted Help Desk Solutions.
- Available Level 2+ troubleshooting and escalation resources.

*"The average company experiences 87 hours of network-associated downtime per year due to security attacks, provider outages, and internal maintenance issues."*  
- Network World, 2004

Advanced and automated solutions are not reserved for Fortune 100 companies. Leverage MHO's experience serving the Enterprise IT sector and implement best-practice solutions to allow you and your company's staff to focus on core requirements and ultimately – Business Development.

Other services available through the MHO Network and Security Practice include:

- **Network Design** – Utilize MHO's experience and partnerships with top-tier telecom partners to ensure industry-best solutions.
- **Network Review and Optimization** - Our engineers will review your network architecture and identify and troubleshoot issues that affect daily business performance, as well as business risk. Do not cover up issues by adding bandwidth or hardware, let MHO spot problems that impact performance.
- **Remote connectivity** - Today's workforce tends to work remotely as much as from the office. MHO has a wide variety of solutions to connect small offices, home workers, and partners to your company network in a safe, secure and robust manner.
- **Security Review and Hardening** - Lost business and revenue due to security breaches continues to impact today's corporate environment. Whether your company is reacting to past issues or trying to comply with public and legal requirements (Sarbanes, etc.), MHO has the depth in experience and resources to meet these needs.
